

Erratum DANMAP 2011

In the printed version of DANMAP 2011, the number of MRSA CC398 cases with no known contact to either pigs or people with contact to pigs was incorrect. The correct number is 24, and corrections have been made in the summary (pages 15 and 21) and in Textbox 13 (page 118).

In the printed version of DANMAP 2011 errors were found in Figure 8.4 concerning *Pseudomonas aeruginosa* (page 109) and in Figure 1 concerning MRSA (page 117). Corrected figures can be found below.

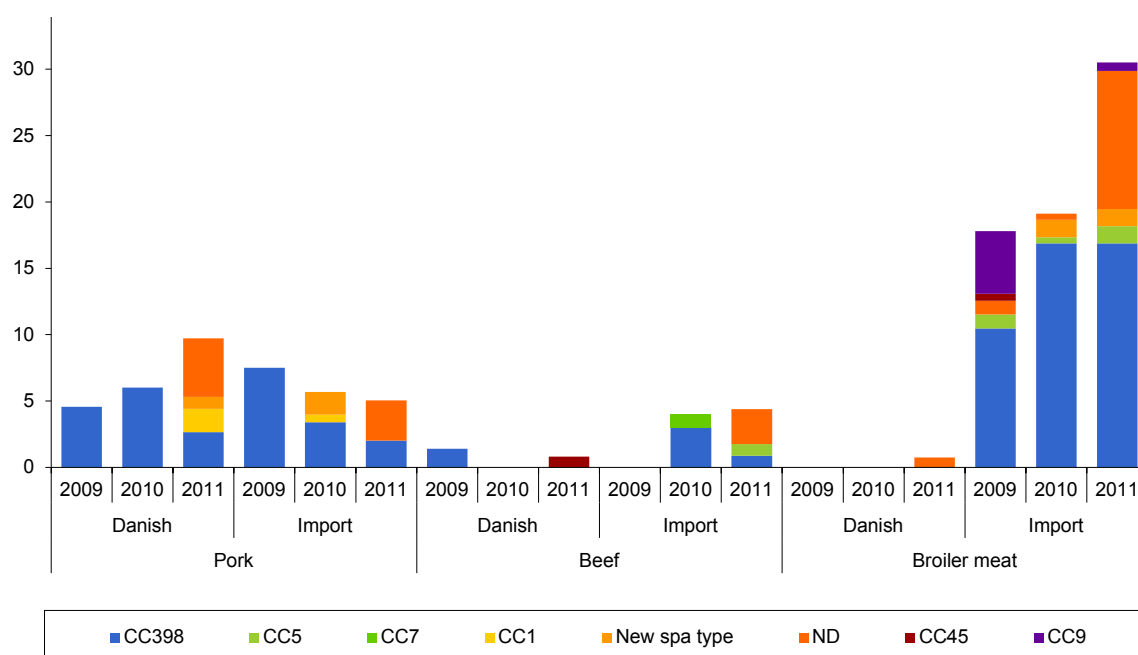

Figure 8.4. Resistance (%) in *Pseudomonas aeruginosa* blood isolates from humans, Denmark

Note: The number (n) in parentheses represents the number of isolates tested for susceptibility in 2011

Textbox 13

Figure 1. Occurrence (%)^(a) of Methicillin resistant *Staphylococcus aureus* (MRSA) in meat^(b), Denmark

Note: ND (Not determined) indicate that the isolates were not spa typed

a) MRSA were isolated after selective enrichment with cefoxitin (4 mg/L) and aztreonam (75 mg/L). colonies with *S. aureus* morphology were verified by PCR and selected isolates were spa typed (n=46 in 2011)

b) Each year, approximately 1,000 samples are collected evenly distributed between the six categories of meat
