

# DANMAP 2018

DANMAP 2018 - Use of antimicrobial agents and occurrence  
of antimicrobial resistance in bacteria from food animals,  
food and humans in Denmark

# Contents

Table A4.1 Use of antimicrobial agents in pigs (mill. kg-doses), estimated total live biomass (mill. tonnes) and total DAPD per age group per year, Denmark

Table A4.2 Use of antimicrobial agents in cattle (mill. kg-doses), estimated total live biomass (mill. tonnes) and total DAPD per age group per year, Denmark

Table A4.3 Use of antimicrobial agents in fur animals (mill. kg-doses), estimated total live biomass (mill. tonnes) and total DAPD per age group per year, Denmark

Table A5.1. Consumption of antimicrobial agents for systemic use in humans (kg active substance), Denmark

Figure A5.2 Bed-days and admissions to hospitals in Denmark, 2009-2018

Figure A5.3 Ratio between bed-days and admissions on a regional level in Denmark, 2009-2018

Table A6.1 Distribution of MICs and resistance (%) in *Campylobacter jejuni* from broilers (n=195) and cattle (n=101), Denmark

Table A6.2 Distribution of MICs and resistance (%) in *Campylobacter jejuni* from human cases reported as domestically acquired (n=94) and associated with travel abroad (n=59), Denmark

Table A6.3 Distributions (n, %) of AMR profiles in *Campylobacter jejuni* from broilers, cattle and human cases, Denmark

Table A6.4 Distribution of MICs and resistance (%) in *Salmonella* Typhimurium from pigs (n=28), Denmark

Table A6.5 Distribution of MICs and resistance (%) in *Salmonella* Derby from pigs (n=43), Denmark

Table A6.6 Distribution of MICs and resistance (%) in *Salmonella* Typhimurium from domestic produced pork (n=40), Denmark

Table A6.7 Distribution of MICs and resistance (%) in *Salmonella* Derby from domestic produced pork (n=41), Denmark

Table A6.8 Distribution of MICs and resistance (%) in *Salmonella* Typhimurium from human cases (n=1), Denmark

Table A6.9 Distribution (n, %) of AMR profiles in *Salmonella* Typhimurium from pigs, domestically produced pork and humans, Denmark

Table A6.10 Distribution of MICs and occurrence of resistance among haemolytic *Escherichia coli* from pigs (n=282), Denmark 2018

Table A6.11 Distribution of MICs and occurrence of resistance among *Actinobacillus pleuropneumoniae* from pigs (n=102), Denmark 2018

Table A6.12 Distribution of MICs and occurrence of resistance among *Streptococcus suis* (n=111) from pigs, Denmark 2018

Table A7.1 Distribution of MICs and resistance (%) in *Escherichia coli* from broilers (n=166), cattle (n=99) and pigs (n=149), Denmark

Table A7.2 Distribution (n, %) of AMR profiles in *Escherichia coli* from broilers (n= 124) and broiler meat (Danish n=36; import n=82) recovered by selective enrichment, Denmark

Table A7.3 Distribution of MICs and resistance (%) in ESBL/AmpC-producing *Escherichia coli* from broilers (n=124) recovered by selective enrichment, Denmark

Table A7.4 Distribution of MICs and resistance (%) in ESBL/AmpC-producing *Escherichia coli* from broiler meat (Danish n=36; import n=82) recovered by selective enrichment, Denmark

Table A7.5 Distribution (n, %) of AMR profiles in *Escherichia coli* from broilers (n=124) and broiler meat (Danish n=36; import n=82) recovered by selective enrichment, Denmark

Table A7.6 Distribution (number of isolates) of MLST and ESBL/AmpC Enzymes combinations detected in the ESBL/AmpC producing *E. coli* isolates from broilers and broiler meat recovered by selective enrichment, Denmark

Figure A8.1 Comparisons of S-I-R interpretations per species according to data origin for each DCM

Figure A8.2 Comparisons of total numbers and S-I-R interpretations for urinary *E. coli* and *K. pneumoniae* for all 10 DCMs

Table A4.1 Use of antimicrobial agents in pigs (mill. kg-doses), estimated total live biomass (mill. tonnes) and total DAPD per age group per year, Denmark

Note: A 'kg dose' is the defined daily dose (DADD) in kg active compound per kg live biomass per day. The DADDs are defined for each antimicrobial agent, administration route and animal species. Total DAPDs are calculated as the total estimated number of kg doses used per year divided by the estimated live biomass in the age group (in tonnes, cumulated over the 365 days in a year)

a) Penicillins with extended spectrum and combination penicillins, incl. b-lactamase inhibitors

	Cattle	7.9	[4.1-14.9]			92.1								7.9

Vertical solid lines indicate EUCAST epidemiological cut-off values. EUCAST clinical breakpoints are indicated as vertical dotted lines if different from the corresponding epidemiological cut-off values

Confidence intervals are calculated as 95% binomial proportions presenting Wilson intervals

White fields represent the range of dilutions tested. MIC values equal to or lower than the lowest concentration tested are presented as the lowest concentration. MIC values greater than the highest concentration in the range are presented as one dilution step above the range

Table A6.2 Distribution of MICs and resistance (%) in *Campylobacter jejuni* from human cases reported as domestically acquired (n=94) and associated with travel abroad (n=59), Denmark

DANMAP 2018

Apramycin	14.5	[10.9-19.1]								73.4	12.1	0.7		13.8						
Ciprofloxacin	0	[0-1.3]	81.2	11.0	1.4	0.4	4.3	1.4	0.4											
Nalidixic acid	6.7	[4.4-10.3]									92.9	0.4	0.4	0.4	6.0					
Colistin	0.4	[0.1-2]							98.2	1.4	0.4									
Spectinomycin	47.2	[41.4-53]											30.5	13.1	9.2	8.2	6.7	32.3		

Note: Isolates from the routine diagnostic laboratory investigation of isolates from dead and diseased pigs submitted to SEGES Pig Research Centre's Laboratory for Pig Diseases in Kjellerup. Occurrences of resistant isolates are presented according to the clinical breakpoints that are currently in use at both DTU National Veterinary Institute and Laboratory for Pig Diseases. The MIC value given is the concentration of amoxicillin. The concentration of clavulanic acid is half the concentration of amoxicillin

Vertical solid lines indicate microbiological breakpoint values for antimicrobial resistance (preferably CLSI); vertical stippled lines indicate breakpoints for intermediate sensitivity

Confidence intervals are calculated as 95% binomial proportions presenting Wilson intervals

White fields represent the range of dilutions tested. MIC values equal to or lower than the lowest concentration tested are presented as the lowest concentration. MIC values greater than the highest concentration in the range are presented as one dilution step above the range

## DCM 10

Note: It differs how and if the individual DCMs, for invasive enterococci, register high-level gentamicin resistance (GEH) in MiBa. It also differs whether they register an S-I-R interpretation or just the zone diameter/MIC. In all cases: R always refer to high-level gentamicin resistance positive (isolates with the zone diameter <8 mm or a MIC >128 mg/L), and S or I always refer to high-level gentamicin resistance negative (isolates with gentamicin zone diameter ≥8 mm or a MIC ≤128 mg/L).

Glossary: AMC = Amoxicillin/clavulanate, AMP = Ampicillin, CAZ = Ceftazidime, CIP = Ciprofloxacin, CPD = Cefpodoxime, CRO = Ceftriaxone, CTX = Cefotaxime, CXM = Cefuroxime, GEN = Gentamicin, GEH = High-level gentamicin resistance, LNZ = Linezolid, MEC = Mecillinam, MEM = Meropenem, TZP = Piperacillin/tazobactam, VAN = Vancomycin

DCM = Department of Clinical Microbiology, MiBa = The Danish Microbiology Database

## A8.2 Comparisons of total numbers and S-I-R interpretations for urinary *E. coli* and *K. pneumoniae* for all 10 DCMs added together

### Hospital urines

### Primary health care urines

Glossary: AMC = Amoxicillin/clavulanate, AMP = Ampicillin, CAZ = Ceftazidime, CIP = Ciprofloxacin, CPD = Cefpodoxime, CTX = Cefotaxime, CXM = Cefuroxime, GEN = Gentamicin, MEC = Mecillinam, MEM = Meropenem, NIT = Nitrofurantoin, SUF = Sulfonamide, TMP = Trimethoprim, TZP = Piperacillin/tazobactam
